LUNDAHL — TRANSFORMERS —

93

<p style="color: magenta; font-weight: bold; font-size: 1.2em;">Important Read this!</p> <p style="color: magenta; font-size: 1.5em;">----></p>	<p>With LUNDAHL, all PLATE chokes can be used as POWER SUPPLY chokes and vice versa. Though Power Supply chokes are specified @ ~RMS, and subject to ~100Hz or ~120Hz ripple, they are made with audiophile cores, and full audio range always.</p> <p>Chokes with high inductance have many windings, and so higher DC resistance. This protects the rectifiers and capacitors. Though you do have some voltage loss across the DC resistance, this resistance limits the current, when the choke is saturated at cold start, due to empty capacitors. In case you do not want the power loss, lower resistance types exist too. For convenient selection, we have put them all here in one table, first sorted by DC Current, then by Henry.</p>

CHOKES for Anode or Power Supply.

Note, there is little logic in the product numbers. Select from this table first your DC current, then choose the Henry. Mind the DC resistance. Check the Lundahl section, "Plate Chokes" about how and why it is allowed to exceed the rated DC current.

Lieber Kunde, wir dürfen keine Yamamoto Elektro-Geräte nach Länder liefern, wofür das Deutsche Elektro- und Elektronikgerätegesetz Gültigkeit hat. Die Grünen wollten damit sicherstellen, dass Endverbraucher die Yamamoto Geräte kostenlos verschrotten lassen können, wofür wir noch diese Kosten im Voraus entrichten müssten. Ob nun edle HiFi Geräte, oder wegwerf-Akkuschrauber, alles geht nach Gewicht. Das müssten wir monatlich umständlich berichten und bezahlen, auch wenn in dem Monat nichts anfällt. Diesen behördlichen Unsinn machen wir nicht mehr mit. Wir bitten daher um Ihr Verständnis, dass wir nur Yamamoto Bauteile liefern. Bedanken können Sie sich gerne hier: www.gruene.de
